

# Debris

## Visualization Techniques

- 1 Porta-Potty = 2 CY
- 1 Dump Truck = 13 CY
- 1 Recycle Roll Off (15' x 6' x 6') = 20 CY
- 1 Dump Trailer (42' x 8.5' x 6') = 84 CY
- Mobile Home Park = 1 Single Wide = 290 CY  
1 Double Wide = 415 CY
- Home with no basement = 25-30 CY of personal property
- Home with a basement = 45-50 CY of personal property

## Formulas

- General Building =  $\frac{L' \times W' \times H' \times .33}{27} = \text{CY}$
- Single Family Home:  $L' \times W' \times S \times .20 \times 1.3 = \text{CY}$   
\*S = Number of stories
- Mobile Home =  $\frac{L' \times W' \times H'}{27} = \text{CY}$
- Debris Piles =  $\frac{L' \times W' \times H'}{27} = \text{CY}$
- In Home Flood Debris = Sq Footage x .02 = CY

## Conversions

- Construction / Demolition Debris = 1 Ton = 2 CY
- Mixed Debris = 1 Ton = 4 CY
- Vegetative Debris = Hardwoods = 1 Ton = 4 CY  
Softwoods = 1 Ton = 6 CY

# South Carolina Public Assistance

## Damage Assessment Methods

Fly-Over Survey  
Windshield Survey  
Walk-through Survey

## Evaluation Process

### Cosmetic

Broken windows  
Blown in doors  
Broken light fixtures  
Missing shingles  
Chipped siding  
Broken gutters  
Broken garage door  
Landscape

### Structural

Broken walls  
Broken floor/foundation  
Roof penetration  
Foundation shift  
High water level  
Integrity compromised  
Section of house gone  
Residence totally removed

# Structure Descriptions

## Standard Building Measurements

Brick: 2.5" high	Door knob: 36" from floor
Porch step: 7" high	Aluminum siding: 4" or 8" high
Concrete block: 8" high	Total one-story: 15' high

## Flood Water Depth Chart

	Single / Multi Family Home	Manufactured Home
<b>Affected</b>	< 3" of water	Cosmetic damages only
<b>Minor</b>	3"-18" of water	Water line below the floor
<b>Major</b>	18" of water	Water to the floor
<b>Destroyed</b>	Beyond repair Uninhabitable	Water higher than 12" Uninhabitable

- 24 hours of standing water = increase one damage level
- Contaminated water = increase one damage level and identify contaminants

## Wind Damage Description Chart

	Single / Multi Family Home	Manufactured Home
<b>Affected</b>	Some shingle damage Few broken windows	Minor dents to roof or siding
<b>Minor</b>	1 wall damaged Section of roof damaged or missing	Utility connections broken Slight foundation movement
<b>Major</b>	Significant structural damage to walls/roof	Wall and roof damage Foundation shift
<b>Destroyed</b>	Total loss Structure compromised	Total loss Bent frame/buckled walls

## Affected

- Structure received minimal damage
- Home is safe to live in
- Damage is cosmetic only

## Minor

- Structure is damaged and uninhabitable
- Minor repairs are necessary and can be completed within 30 days
- Tree(s) fallen without penetrating structure

## Major

- Significant damage and uninhabitable
- Extensive repairs are necessary and will take longer than 30 days
- Major damage to utilities
- Foundation shifting

## Destroyed

- Structure is a total loss / not economically feasible to rebuild / permanently uninhabitable
- Condemned by building officials

## Inaccessible

- Team cannot safely enter in order to verify damage due to flooding, downed trees, unhealthy conditions, etc.
